
LAS Version 5.7 Latest Features

June 2013

New Report:

- Response & Care time per user
 - Performance of your Staff Members:
 - How Many Alarms each member responds to;
 - How quickly they accept the alarms;
 - How quickly they arrive at the alarm point;
 - How long they have been checked in, or how long they stay present with each resident;

Results driven by *Gamification* :

“Gamification techniques leverage people's natural desires for competition, achievement, status, self-expression, altruism, and closure.”

- Individual Feedback on performance;
- Measurements on trial sites in Europe have shown a 40% increase in response times;

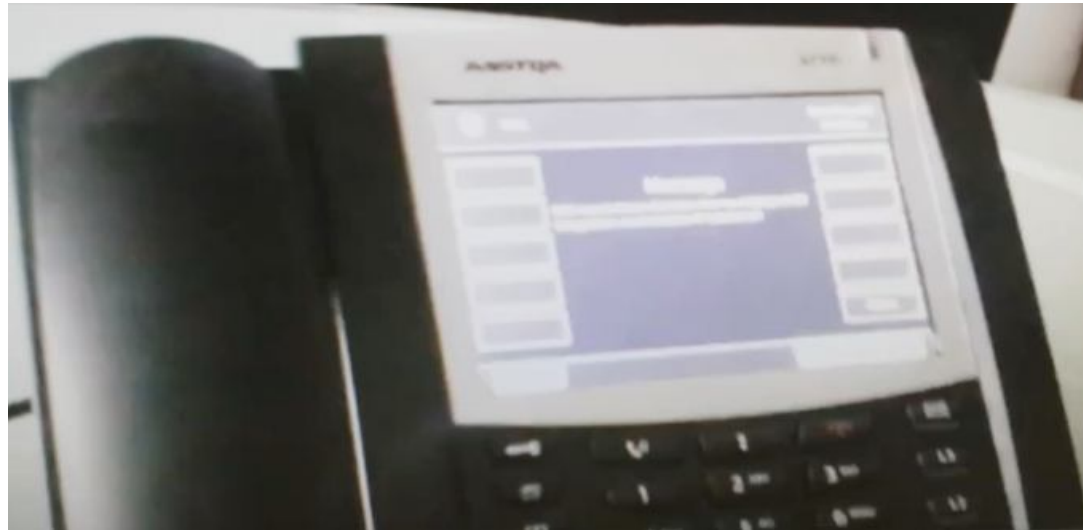

Spectralink Improvements

- Alarm sound not played if user on phone
- New Duress Alarm Functions:
 - Duress / Man Down / No Motion /Running
 - Combined Alarms to reduce false events e.g.
 - Man Down + No Motion = Duress Event
- User oriented messages, not devices. No longer relying on the device for messages .

LAS now sends to Aastra Desk phones

*Why not use **Aastra Desktop** phone to receive messages from any system?*

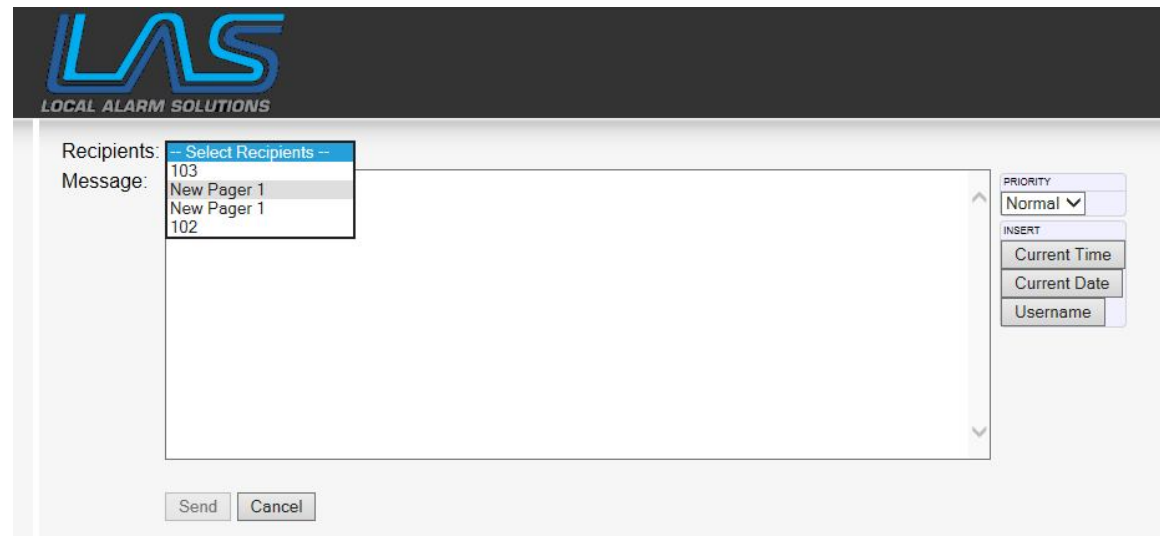

Web Based Messaging

- Log into any Web browser and use the internet or intranet to send messages through LAS

Send to :

- DECT
- Spectralink
- Pagers
- GSM

The screenshot shows the LAS (Local Alarm Solutions) web-based messaging interface. At the top, the LAS logo and "LOCAL ALARM SOLUTIONS" are displayed. Below this, there is a "Recipients:" field with a dropdown menu showing "103", "New Pager 1", "New Pager 1", and "102". A "Message:" text area is positioned below the recipients. To the right of the message area, there is a "PRIORITY:" dropdown menu set to "Normal", and an "INSERT:" section with buttons for "Current Time", "Current Date", and "Username". At the bottom of the interface, there are "Send" and "Cancel" buttons.
