Simply click on the link in LAS to see a location on a map in Google or Bing

Alarms sent to Android Phones:

- BYOD (Bring Your Own Device);

***BYOD** is making significant inroads in the business world, with about 75% of employees in high growth markets such as Brazil and Russia and 44% in developed markets already using their own technology at work. In most cases, businesses simply can't block the trend. Some believe that BYOD may help employees be more productive. Others say it increases employee morale and convenience by using their own devices and makes the company look like a flexible and attractive employer*

Samsung Galaxy S4

Spectralink Improvements

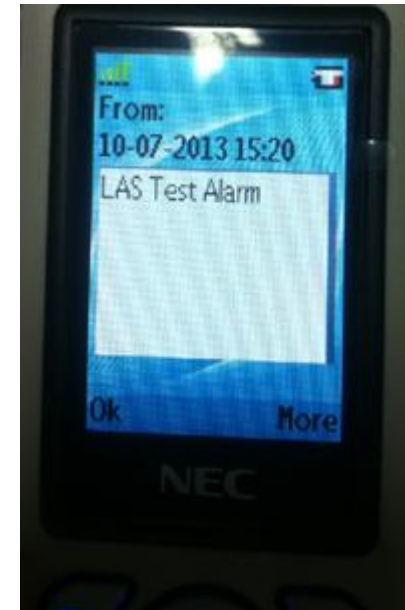

- Messages sent to User logins
 - When a Spectralink user logs into their handset, they receive their profile, LAS now knows which messages to send the user based on their Skill Set and user login, (which has been preconfigured by their user login)

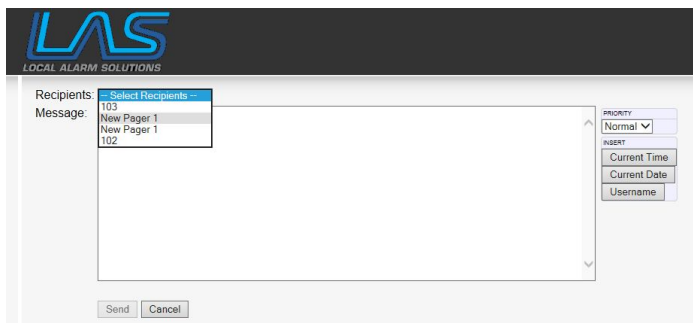

LAS now sends to NEC IP DECT Phones

LAS now can send handset specific messages direct to the NEC IP PABX (over IP), the PABX then forwards the messages to handsets via DECT.

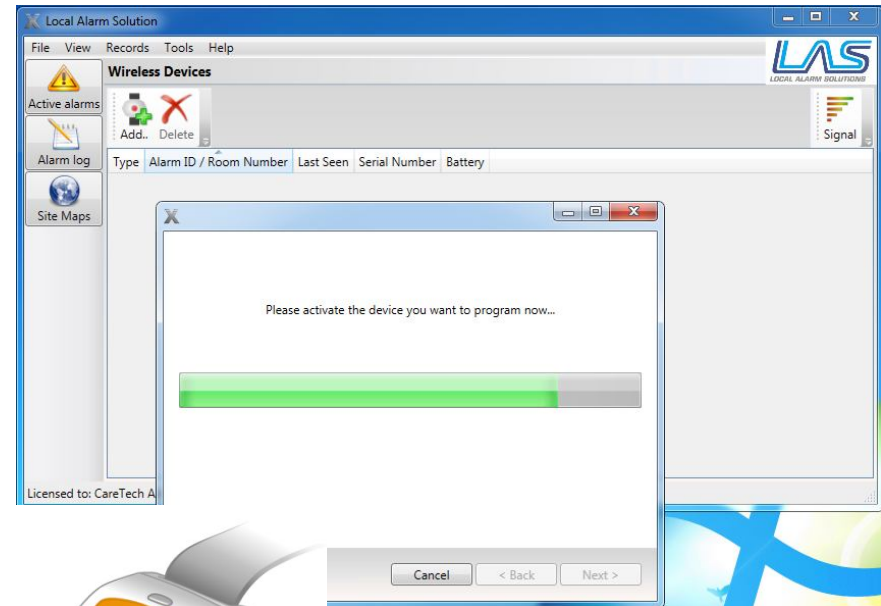

Try our Web interface to send messages to teachers in schools

CareTech Radio Devices Direct into LAS

- LAS now can act as the Head End which allows all Radio devices to go into the Radio Receiver then be converted to IP and sent Directly into LAS.
